# 1. Opera

Opera released its new version of its web browser Opera 12 on June 14 last. The new version includes support for WebRTC. Although Opera has less than 3% of the browser market they are becoming much more popular in the mobile phone and tablet market.

The WebRTC getUserMedia API works out of the box in Opera 12 and can be used by any website. Due to the potential privacy and security implications, the user is automatically prompted by the browser before the feature is allowed to be activated.
